

NEW FOR 2009

Beginning in June of 2009, Legacy's Venetian Micro-Topping, and Artisan Overlay will be designed as two component acrylic modified grout mixes. The Legacy Perfetto-Espray Matrix 200, Legacy Venetian Micro-Topping, and the Legacy Artisan Overlay Stamp Coat will need to be mixed with the Legacy PolyMod 200.

The PolyMod 200 has also been changed and improved for better workability and overall strength of the product. Because of these changes, our new **PolyMod 200 should only be used with the new grout mixes. The new grout mixes should only be used with the new PolyMod 200 formula.** All new products will have a sticker advertising that the product is the new formulation. Please pass this information on to your own customers and read the TIS and mixing instructions printed on the bags to help avoid potential problems.

Legacy is also introducing the "Legacy Primer". The Legacy Primer is recommended for priming the surface before applying the Legacy Perfetto-Espray Matrix 200, Venetian Micro-Topping and Artisan Overlay StampCoat mixes. Legacy Primer should be used prior to installing the Legacy overlay line of mixes. After the concrete is clean, free of debris and fully dry, apply the Legacy Primer. Apply with a sprayer, roller or with a broom, make sure the surface is fully wet and avoid puddles. After the Legacy Primer dries, proceed with the Legacy Perfetto-Espray Matrix 200, Venetian Micro-Topping and Artisan Overlay StampCoat mixes.

We believe these changes make our products better and will produce better results and jobs for everyone involved. We appreciate your business and look forward to serving you in the future.
